DETAILED ACTION

Claim Rejections - 35 USC § 103

1. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

2. Claims 1-5 and 10 are rejected under 35 U.S.C. 103(a) as being unpatentable over Willke et al. in view of DeGrace.

The patent to Willke et al. discloses an assembly system for assembling an internal combustion engine fuel injector comprising a hollow body 14 supporting an injection nozzle 27, the hollow body 14 housing a metering valve 18 for metering the fuel to be injected by the nozzle and having a cylindrical cavity, a support 5 housing an electromagnetic 1 controlling the metering valve 18, a sleeve 24 inserted in fluidtight manner inside the cylindrical cavity as recited in claim 3, and the support 5 being fitted to the hollow body 14 by a weld 16. Willke et al. do not disclose the support being connected removably to the hollow body by a click-on means. The patent to DeGrace teaches a fuel injector in which various parts are removably connected to each other by a click-on means for quick separation from each other when necessary. It would have been obvious to one having ordinary skill in the art at the time the invention was made to have modified the device of Willke et al. by replacing the weld with a click-on capability as taught by DeGrace in order to be able to easily separate the housings from each when necessary. Although DeGrace does not disclose leaf springs, the catches

56 of DeGrace function as leaf springs which clicks into retaining element 58 as recited in claim 2.

Allowable Subject Matter

3. Claims 6-9 and 11 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

Conclusion

4. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. The patents to Rice et al. and Nally et al. are pertinent to Applicant's invention.
